

MnSTAC Members:
Do you plan to have *Roots in Minnesota*?

You know that:

- Stronger storms and EAB will eliminate 1/3 of Minnesota's community tree canopy in the next 20-30 years.
- Community forests are comprised of the top 3 vulnerable species.
- Communities planted only a few tree varieties in the aftermath of Dutch Elm Disease.
- More than 80% of available land for planting and managing trees in cities is on private property.

MnSTAC has identified "outreach to residents" as its highest priority for protecting and enhancing tree cover.

Do your part. Join your colleagues in Saint Paul, Minneapolis, St. Louis Park, Minnetonka and Chanhassen in utilizing MnSTAC's *Roots in Minnesota Campaign*. **Budget for your toolkit** that has everything you need to educate homeowners on the value of trees and motivate tree planting and care in the community/communities you serve.

Find the toolkits at www.rootsinminnesota.com or call our campaign partners at CEL Public Relations for more information: 763-559-6058
